AQUATIC LIMITED WARRANTY
AQUATIC
Product Registration Information

Your product warranty is registered and confirmed with Aquatic through the Serial Number on your unit. You do not need to contact Aquatic to confirm registration. Please fill out the information below and reference when contacting the distributor to expedite warranty claims.

OWNER INFORMATION:

Model Name

Serial Number

Purchase Date

Distributor

Model & Serial Number Location

The tub model and serial numbers are located above the pump area on the backside of the bathtub. An access panel should be placed by the installer at this location.

AQUATIC
The bath people

Customer Service: 800.945.2726
www.aquaticbath.com
Please read and follow all of the instructions contained in this Owner’s Manual before installing, operating or maintaining your whirlpool. In addition, you should continually refer to these instructions during the life of your whirlpool. Failure to comply with these instructions may invalidate your warranty. If you have any questions concerning installation, operation, maintenance or any other aspect of your whirlpool, please contact:

AQUATIC CUSTOMER SERVICE CENTER: (800) 945-2726
(The Troubleshooting Guide on page 21 may be helpful in answering some of your questions.)

IMPORTANT!
This product MUST BE WATER-TESTED and inspected prior to installation or warranty will be voided. Neither Aquatic nor the distributor will be responsible for removal or reinstallation costs should replacement of the bath be necessary.

PLEASE CHECK ENTIRE UNIT FOR ANY DAMAGE.
If it appears damaged, contact your Aquatic Distributor immediately.
Aquatic warranty does not cover damage that occurs in transit.
IMPORTANT SAFETY INSTRUCTIONS

WARNING: When using this unit, basic precautions should always be followed, including the following:

READ AND FOLLOW ALL INSTRUCTIONS:

• **WARNING**: Risk of lethal electric shock. To reduce risk of electric shock, connect only to circuits protected by a Ground-Fault Circuit-Interrupter (GFCI) or Residual Current Device (RCD).

• **DANGER**: To reduce the risk of injury, do not permit children to use this unit unless they are closely supervised at all times.

• Use this unit only for its intended use as described in this manual. Do not use additional attachments and/or equipment not recommended by the manufacturer.

• Never drop or insert any object into any opening.

• Do not operate this unit without the guard over the suction fitting.

• The unit must be connected only to a supply circuit that is protected by a Ground-Fault Circuit-Interrupter (GFCI). Such a GFCI should be provided by the installer and should be tested on a routine basis. To test the GFCI, push the test button. The GFCI should interrupt power. Push the reset button. Power should be restored. If the GFCI fails to operate in this manner, there is a ground current flowing, indicating the possibility of an electric shock. Do not use this unit. Disconnect the unit and have the problem corrected by a qualified service representative before using.

• This product is intended for **indoor** use only. Installing this unit outdoors could cause personal injury and will void your warranty.

SAVE THESE INSTRUCTIONS.

Pump/motor:
A separate 120-volt, 60-Hz, AC-only, 15-ampere circuit, protected by a Ground-Fault Circuit-Interrupter (GFCI) (GFCI) is required.

---

Electrical Shock Hazard
Plug into a grounded 3-prong outlet.
Do not remove ground prong.
Do not use an adapter.
Do not use an extension cord.
Failure to follow these instructions can result in death, fire, or electrical shock.

Your safety and the safety of others are very important.

We have provided many important safety messages in this manual and on your appliance. Always read and obey all safety messages.

This is the safety alert symbol. This symbol alerts you to potential hazards that can kill or hurt you and others.

All safety messages will follow the safety alert symbol and either the word “DANGER” or “WARNING.” These words mean:

**DANGER**
You can be killed or seriously injured if you don’t immediately follow instructions.

**WARNING**
All safety messages will tell you what the potential hazard is, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.
IMPORTANT SAFETY INSTRUCTIONS

Before taking your first whirlpool bath, be sure you have performed the “test run.” [See OPERATION INSTRUCTIONS on page 16.] Be sure that you are familiar with all the controls and switches and that the unit is operating properly.

1. The water in a whirlpool should never exceed 40º C (104º F). Water temperature between 38º C (100º F) and 40º C (104º F) are considered safe for a healthy adult. Bathing time should be limited to approximately 30 minutes, followed by a shower to cool down. Longer exposure may result in hyperthermia. The symptoms of this condition are nausea, dizziness and fainting, which can be fatal. Lower water temperatures are recommended for extended use (exceeding 10-15 minutes) and for young children.

2. If you will not be operating the whirlpool system during your bath, you may fill the bathtub to any comfortable level. However, if you will operate the system, you must fill the bathtub as described in the section entitled OPERATION INSTRUCTIONS on page 16. This will assure proper operation of the system and keep the jets from spraying water outside the bathtub.

3. A few important bathing “DON’T’S” -

DO NOT operate the whirlpool system if:

- The bathtub isn’t filled to required levels above jets.
- You’re pregnant (until you’ve consulted your doctor).
- You’re taking medications or drugs that may make you drowsy.
- You’re drinking any form of alcohol.
- You’ve just had a meal. Wait for 30 minutes after eating.
- There is a child in the bathtub who may be left unattended at any time. Never allow small children to remain unattended in any bathtub.
- There are any small objects in the bathtub. The jet action can move small objects at high speeds, causing possible injury.
- The safety suction cover is not in place. The suction cover is the large fitting with a pattern of holes on its face, mounted on the bathtub’s side wall. See Figure 1.
- You’re smoking. The heat of burning tobacco can damage the bathtub surface. Keep tobacco products and ashtrays away from the bathtub.
- You have problems with your immunity system (until you have consulted your doctor).
- Never operate electrical appliances (television, hair dryer, radio, telephone, etc.) inside or within five feet (5’) of the bath.
- You are using additional attachments and/or equipment not recommended by the manufacturer.
- You have a medical history of heart disease, low or high blood pressure, circulatory system problems, or diabetes, consult with a physician before using a whirlpool.
- You are under the influence of drugs, anticoagulants, stimulants, antihistamines, vasoconstrictors, vasodilators, hypnotics, narcotics, or tranquilizers.

Figure 1
PRE-INSTALLATION REQUIREMENTS

TOOLS REQUIRED FOR INSTALLATION: (NOT INCLUDED)

- Drill
- 3/16" Drill Bit
- Phillips Screw Bit
- Tape Measure
- #10 x 1 ½" self-tapping washer head screw
- OR 1 ½" Galvanized roofing nail
- Safety Glasses
- Hammer
- Level
- Pencil

INSPECTION BEFORE INSTALLATION

1. Inspect the Aquatic jetted bath to ensure it is the correct model number, size, color, and has all features, options and accessories originally ordered.

2. If damage or shortage has occurred, notify your distributor, freight carrier, or Aquatic Customer Service Center at (800) 945-2726.

NOTICE: Under no circumstances should a damaged or defective bath be installed without prior factory approval. Neither Aquatic nor the distributor will be responsible for removal or reinstallation costs should replacement of the bath be necessary.

3. Whirlpool is factory-assembled, complete with motor, pump, controls and plumbing. DO NOT lift or support unit using plumbing lines or any part of circulation system. DO NOT relocate or otherwise modify any part of the factory-installed circulation system, as this may affect the performance or safe operation of the whirlpool and will VOID ALL WARRANTIES.

4. For an Aquatic jetted tub supplied with a motor that has an integral pneumatic on/off switch - Make certain the air tube that is connected to the motor is also connected to the on/off button nipple under the deck in order for the system to function.

5. Inspect whirlpool unit and circulation system carefully before installing. Water test the unit before installation. If any damages or defects are observed, DO NOT INSTALL. Repack unit and notify distributor immediately.

6. This unit has been factory-tested prior to shipment for leakage and proper operation of the system. However, in transit and handling, the half-unions on the suction and discharge ends of the pump may become loose. Make sure these are hand-tight.
BEFORE YOU START

IMPORTANT: Observe all governing codes and ordinances.

1. Proper installation is your responsibility. Have a qualified technician install this bath.

2. Installation using a Ground-Fault Circuit-Interrupter (GFCI) is required. [See ELECTRICAL CONNECTIONS on page 13.]

3. It is your responsibility:
   • To contact a qualified electrical installer.
   • To assure that electrical installation is adequate and in conformance with National Electrical Code, ANSI/NFPA 70 - latest edition.

Copies of this standard may be obtained from:
National Fire Protection Association
One Batterymarch Park
Quincy, Massachusetts 02169
(617) 770-3000
INSTALLATION REQUIREMENTS

PRE-PLANNING ACCESS, PLUMBING & ELECTRICAL INSTALLATION

1. Ensure that the floor is level and can support a load of 50 lbs. per square foot. (If floor is not level, shims may be needed to level the bath.)

2. Plan installation to permit access for servicing. A minimum access panel of 14” x 18” must be provided to access the pump or other equipment should service be needed at a later date.

3. Rough-in should be kept to a minimum until the unit is on the job site. Measurements may vary plus zero and minus 3/8” (+0, -3/8”) from original specifications.

4. Sufficient clearance must be provided for access to service connections (motor, pump, and heater.)
   a) Alcove Installation (with optional skirt panel): Access is provided by removing the skirt panel. To permit removal of skirt panel, allow at least 6’ (150) clearance at both ends of tub: vanity, toilet, etc. must not obstruct skirt removal.
   b) Island or Pier Installations: Provide access panel at motor end. [See FRAMING & INSTALLATION TYPES on page 11.]
   c) Sunken Installations: Provide access panel in floor or in ceiling below.

5. Drain/waste pipe stub must be located in wall or floor to match location of drain, waste and overflow kit tee fitting. Provide a 6” (150) x 12” (300) box-out in sub-floor or slab.

6. When fittings (spout, handles, valves, etc.) are to be mounted on the unit, be certain that the hot and cold water copper supply lines are located where there is ample room for mounting before setting the unit in place.

7. Bathtub must be installed indoors only. Do not install outdoors or warranty will be voided.

WARNING – When using electrical products, basic precautions should always be followed, including the following:
   a) DANGER - Risk of Electrical Shock. Connect only a separate circuit protected by a Ground-Fault Circuit-Interrupter (GFCI).
   b) Connection - Electrical hook-up must be performed by a licensed electrician in accordance with local, state and national electrical codes.
   c) Access Panel Required - For build-in custom units, provide an access panel for servicing electrical components. [See FRAMING & INSTALLATION TYPES on page 11.]

FRAMING & INSTALLATION TYPES

1. Protect interior of tub throughout installation process.

2. Framing and supports will vary according to the model and type of installation selected.
DECK CUTOUT - A paper template will be enclosed with all oval models. For the deck cutout, scribe on the deck two center lines (a major and minor axis). Next, match the center lines and trace the ellipse. Repeat this step three more times. Once the tracing is complete, cut out the ellipse. The dimensions should be exactly 2" (50) smaller than the unit.

A - 6" x 12" (150 x 305) Box-outs
B - Leveled Supports
1" x 3" (25 x 75) Ledgers
C - 14" x 18" (305 x 460) minimum access
WARNING - When using electrical products, basic precautions should always be followed, including the following:

DANGER - RISK OF ELECTRIC SHOCK. Connect only to a circuit protected by a Ground-Fault Circuit-Interrupter (GFCI).

(For built-in and custom units.) Install to permit access for servicing.

1. Install outlet(s) as shown. The outlet must be a minimum of 6” above the floor and be accessible through the access panel. [See ELECTRICAL CONNECTIONS on page 15.]

2. Place the bath in the location for installation. Check that the bath is level (length and width). A carpenter’s level is recommended. If necessary, place shims under support legs. Make measurements for framework construction. Remove bath from location.

   - Ensure that construction and construction materials comply with applicable code requirements for the installation site.
   - All framing must be square, level and designed to provide structural support.
   - Do not allow tub rim to support any of the bath weight.

4. An access panel, 14” x 18” minimum, must be provided to allow access to the pump, electrical connections, and other accessories.

5. Lift unit by the rim and place in alcove of framework. If necessary, shim feet until unit just rests on leveled edges or framework. Secure the unit by fastening the bottom feet to the subfloor with any construction adhesive.

6. The rim of the bath is not designed to support weight. If finished material is to overlap or contact the bath, the added weight must be fully self-supporting.

7. Most (not all) Aquatic integrally skirted whirlpools have color matching removable panels for alcove and corner installations. All integrally skirted units MUST BE INSTALLED BEFORE the finished floor and wall materials are installed.

To remove skirt panel: Simply pry loose at the top corners and pull outward (away from frame).

To reinstall skirt panel: Simply set panel in frame (bottom side first) and push forward. Lightly depress the tabs on the top of the panel while pushing forward until the panel snaps into its frame.
INSTALLATION INSTRUCTIONS

ELECTRICAL CONNECTIONS

READ AND FOLLOW ALL INSTRUCTIONS
All local state and national electrical codes must be observed by a licensed electrician in connecting power to the Aquatic whirlpool.

Important Safety Instructions

WARNING - When using electrical products, basic precautions should always be observed, including the following:

1. READ AND FOLLOW ALL INSTRUCTIONS.

2. Circuit - A separate circuit (not to supply any other electrical devices) is required as follows: Each electronic component (pump and heater) must be connected to a separate 120 VAC 15 AMP circuit.

3. GFCI - A Ground-Fault Circuit-Interrupter (GFCI) must be installed in the circuits which bring power to the whirlpool; do not omit. To test the GFCI, push the test button. The GFCI should interrupt power. Push the reset button. Power should be restored. If the GFCI fails to operate in this manner, there is a ground current flowing, indicating the possibility of an electric shock. Do not use this unit. Disconnect the unit and have the problem corrected by a licensed electrician before using.

4. Grounding - Motors have a three prong electrical plug. A ground should be run from J-box receptacle to electrical house panel per code.

5. Bonding - A pressure wire connector is provided on the exterior of some motors and heaters (optional) within this unit to permit connection of a No. 8 AWG solid copper bonding conductor between all electrical equipment, as needed to comply with local requirements. Double plastic insulated motors have no pressure wire connector as it is not needed.

6. Wall Switch - A remote wall switch is required by many state codes. It must not be within 5 ft (1.5m) reach of a bather while standing in the tub and it must be mounted at a height to be out of the reach of small children. Not further than 10 ft (3.0m) away. Verify this requirement with your local State and/or Municipality.

7. Integral On/Off Switch - For an Aquatic whirlpool supplied with a motor that has an integral on/off switch - Make certain the air tube that is connected to the motor is also connected to the on/off button nipple under the deck in order for the system to function.

INSTALLATION INSTRUCTIONS

FINAL SYSTEM TEST & CLEAN-UP

System Test

To test system, follow these steps in order listed:

1. Fill clean tub with water to a point no less than 3” (75) above the highest jet.

2. To test the Ground-Fault Circuit-Interrupter (GFCI), push the test button. The GFCI should interrupt power. Push the reset button. Power should be restored. If the GFCI fails to operate in this manner, there is a ground current flowing, indicating the possibility of an electric shock. Do not use this unit. Disconnect the unit and have the problem corrected by a licensed electrician before using.

3. Turn on integral on/off switch.

4. Push on/off button on the whirlpool.

5. Allow system to run a full 10 minutes.

6. Through access door or removable skirt, check for leaks in whirlpool plumbing system. Make sure half-unions at both ends of pump are hand-tight. If leakage is occurring at any other points, notify distributor.

7. If any electrical malfunctions occur, immediately unplug the unit and consult a licensed electrician. Malfunctions of the pump/motor, whirlpool controls or the circulating system should be reported to the distributor who supplied the whirlpool tub.

Clean-up

1. Remove all construction residue and foreign materials. Wipe unit clean with a damp rag, otherwise staining may occur.

2. Plaster may be removed by scraping with the edge of a piece of wood or rigid plastic. DO NOT use metal scraper. For spots left by plaster or grout: rub lightly with a liquid detergent (Spic-N-Span®* or similar) on a damp cloth or sponge.

3. DO NOT use abrasive cleaners, scouring powders, steel wool, wire brushes or anything else that may harm or dull the surface.

4. Dulled areas can be restored to a high gloss with white or cream-colored automotive rubbing compound, followed by application of carnauba wax or white or cream automotive paste wax and buffing.

5. Remove minor scratches with 600 grit wet/dry sandpaper, followed by Step #4 (above).

6. Major gouges require professional repair. Contact Aquatic to arrange factory-authorized repair services.

*Note: See page 18 for trademark information.
YOUR WHIRLPOOL BATHTUB — WHAT IT IS AND HOW IT WORKS.

Your whirlpool bathtub is a large, extra deep bathtub with a built-in circulating system that mixes the bath water with air and pumps the mixture back into the bathtub creating the hydromassage action. Because it is a bathtub it must be drained after each use.

The circulating system mixes air and water and must never be operated unless the bathtub is filled as described below.

BEFORE YOUR FIRST USE

The professionals who installed your whirlpool bathtub received detailed installation procedures, some of which you need to know about before filling and operating your bathtub for the first time.

1. **Make sure bathtub is clean** - If there are any residues or foreign materials left from construction, clean the bathtub thoroughly. Use only the methods and materials described in the section entitled MAINTENANCE AND CARE on page 17.

2. **Fill bathtub above jets** - For your first “test run,” fill the bathtub until the water is at least 3” (75) above the highest jet. Never operate the whirlpool unless water is at least this high.

3. **Optional remote power switch** - A separate switch on your bathroom wall may control power to the whirlpool bathtub. For your safety, it should not be within reach of a person standing in the bathtub and it should be high enough to be out of reach of small children. Please refer to and abide by all state and local plumbing and electrical codes.

Starting the whirlpool system: If installed, set remote power switch to ON.

1. **On/off button** - Models, so equipped, will have a button mounted on the bathtub. Pushing the button forces a column of air to a control which turns the pump motor on or off.

2. **Ground-Fault Circuit-Interrupter (GFCI)** - Test the GFCI as described in the section IMPORTANT SAFETY INSTRUCTIONS on page 6. This extra safety device is mounted either at the remote power switch or in your home’s electrical panel. Push the test button. The GFCI should interrupt power. Push the reset button. Power should be restored. If the GFCI fails to operate in this manner, there is a ground current flowing, indicating the possibility that a lethal electric shock can occur. Do not use this product until the problem is corrected by a licensed electrician.

3. **Directional jet nozzles** - You can adjust the jets position to concentrate the whirlpool action against a specific part of the body.
MAINTENANCE AND CARE

TUB CARE

- Ground-Fault Circuit-Interrupter (GFCI): This device must be tested on a routine basis. [See IMPORTANT SAFETY INSTRUCTIONS on page 6.]

Cleaning Your Whirlpool Bathtub

IMPORTANT: Use only the recommended cleaners and procedures described in this section. Use of other materials and methods may harm your whirlpool and will VOID THE WARRANTY.

Failure to perform periodic maintenance procedures may cause problems and may harm the bathtub, the circulating system and pump, and will VOID THE WARRANTY.

- Monthly Purge: The whirlpool system must be purged at least once a month.

To remove accumulations of bath residue from the whirlpool system, we recommend that you purge it at least once a month, or more depending upon usage. To do this, follow this simple procedure:

1. Fill the bath with hot water (not exceeding 140°F).

2. Add to the hot water, 4-6 tablespoons of low foaming detergent such as liquid Cascade®* and 24-48 oz. of liquid household bleach, [use lesser amounts shown for 5-foot bathtubs, greater amounts for larger bathtubs].

3. Run the whirlpool for 5 to 10 minutes.

4. Drain the bath completely and refill with cold water only.

5. Run the whirlpool for 5 to 10 minutes, then drain the bath completely. Depending on the usage and/or the content of the local water supply, more frequent purging may be necessary.

If you have followed the monthly purging instructions and still have an excess accumulation of bath residue and desire an alternative cleaning mechanism, we recommend SUPER SYSTEMS CLEAN PLUS manufactured by Stearns Packaging Corporation to rectify this condition. This may be obtained by contacting Aquatic at (800) 945-2726. It is recommended that you follow the instructions provided by the manufacturer with the product. Repeated use may be necessary. SUPER SYSTEMS CLEAN PLUS does not replace necessity to purge your whirlpool system at least monthly with a low foaming detergent and bleach.

*Note: See page 18 for trademark information.
Cleaning Procedures

The surface of your whirlpool bathtub will retain its color and gloss indefinitely with normal use, but many bathroom cleaning agents can harm it. Read and follow the cleaning and maintenance instructions in this manual.

- To keep your Aquatic unit sparkling clean: Apply a coat of good quality automotive paste wax and buff to a high shine with a soft cloth or bath towel. Repeat every six months for easier cleaning and long lasting protection. **NOTE:** Do not wax textured standing/walking surfaces.
- For normal cleaning, any non-abrasive liquid cleaner off the shelf may be used. Be sure to read the label and follow the cleaner’s recommendations. Do not use harsh abrasives as they will harm and dull the finish of your unit. Instead, use warm water and liquid detergents, especially those bathroom cleaners recommended for cleaning fiberglass surfaces, such as Mr. Clean®, Lysol®, Bathroom, chlorine bleach, Easy-Off®, Mildew stain remover, or Liquid Spic-N-Span® and the like.
- For more difficult stains on your anti-skid floor, a paste should be made of a cleanser such as Comet®, Spic-N-Span®, etc. and spread out onto the floor. Allow the paste to sit for 5-10 minutes and then gently scrub with a soft-bristled brush. To prevent scratches, the brush should be no rougher than the texture of a toothbrush.
- For hard water stains, calcium deposits, limescale or difficult soap scum after repeated attempts with the above suggestions, you may try Lime-Away®, or white vinegar for removal of calcium or lime deposits. For soap scum, general black grime or algae, chlorine bleach may be used with moderate scrubbing. In both instances the unit should be rinsed carefully with cold water. Scrubbing is never recommended as it could damage the finish on your floor. Always rinse off all remaining paste.
- To restore a scratched or dull unit: Use an automotive polishing compound applied with a clean cotton rag. Rub scratches and dull areas vigorously. Wipe off residues. Follow with automotive wax treatment described above.
- To remove adhesive: Try 3M™ Natural Cleaner, or rubbing alcohol and rub vigorously until the adhesive dissolves and disappears. These solvents are highly flammable and must be used sparingly and with caution. Do not smoke or permit others to do so. Make sure all nearby heating devices (including pilot lights) are extinguished. Do not allow solvent to go down the drain. Make sure not to contact plastic drain grates or other synthetic materials.

**CAUTION:** When using any cleaning or polishing materials, make sure to read and follow all package instructions carefully. Wear rubber gloves at all times and avoid contact with eyes, skin, clothing, rugs and furnishings. Make sure all residues are rinsed off thoroughly.

**Rubber mats:** If you use a rubber or plastic “anti-skid” mat, make sure to remove it from the unit after each shower to avoid harm to the surface finish.

**Hard Water:** Water in certain areas, if not wiped up after bathing/showering, may cause fading of some bath fixture colors. This is a natural occurrence beyond Aquatic’s control. [See AQUATIC LIMITED WARRANTY on page 25.]

WATER QUALITY

CHEMICAL & WATER QUALITY

Owners of fill and drain whirlpool bathtubs need to know basic information concerning water quality, how it affects the performance and enjoyment of the operation of their tubs, and steps that can be taken by the owner to correct related problems. Important issues are the microbiological and chemical quality of the water.

1. Microbiological Quality

Microbes are present in water supplied by individual wells or water systems and even in the air around us. These microbes are usually in amounts below what is noticeable. Microbes from the water or air or from a bather’s body may settle on wet surfaces such as bathtub surface or piping system where they can grow in numbers. With regards to whirlpool bathtubs, brown/black fungi/mold or pigmented (colored) bacteria can be noted.

Fungi/Mold - Fungi and mold are always present. Usually the levels are such that we don’t notice them. When moisture and temperature are sufficient, the organisms will grow to levels that we may smell and/or see. The best examples of such growth is the very common black growth on the bottom of shower curtains. The best solution to keep these surfaces free from fungi/mold growth is frequent cleaning.

Pigmented Bacteria - A pinkish substance may appear on bathroom fixtures that is very persistent, appearing in the shower, sink and along the water line of toilet bowls. The residue is less likely a problem associated with water quality than with naturally occurring airborne bacteria. The bacteria may produce a pinkish film, and sometimes a dark gray film, on surfaces that are regularly moist, including toilet bowls, shower heads, sink drains, and tiles. The problem is more common in humid areas of the country. In any particular case, the determination of the exact species of bacteria causing the problem would require lengthy and costly laboratory testing; however, most experts believe the bacteria responsible is Serratia Marcescens. These bacteria thrive on moisture, dust and phosphates, and are widely distributed in soil, food and also in animals. The best solution to keep these surfaces free from the bacterial film is continual cleaning. A chlorine containing compound is the best cleaner. Avoid abrasives to limit scratching fixtures, which will make them even more susceptible to bacteria.

2. Chemical Quality

The water supplied by individual wells or water systems always contains chemicals, usually in amounts below those which the consumer would notice. Examples of such chemicals, which are of potential concern for the owners of whirlpool bathtubs, are calcium and magnesium salts, copper, iron, manganese and sulfates. When these chemicals are present in sufficient amounts, they may cause problems in whirlpool bathtubs. You should contact your water supply or treatment company and follow their suggestions for treatment.

Calcium and Magnesium Salts - Collectively, the various compounds of calcium and/or magnesium are referred to as salts. Calcium and magnesium salts are often found in ground water supplies and cause “hardness” in water. Hard and soft water are relative terms. Hard water retards the cleaning action of soaps and detergents, causing expense in the form of extra work and cleaning agents. When hard water is heated, it will deposit a hard scale. With regard to whirlpool bathtubs, high calcium and/or magnesium levels may result in the formation of white stains and scale formation on the inside of the tubs, especially noticeable with colored tubs. If this occurs, you need to contact the water supplier to determine the calcium and/or magnesium content and/or corrosion potential of the water and follow their suggestions for treatment. If your water supply is generated from a well, you need to contact a water treatment company to test your water and suggest solutions if a problem is present.
WATER QUALITY

Iron - Iron is found in many natural waters especially from wells. Iron in water can also result from the corrosion of piping in the water supply system, such as cast iron mains or galvanized steel service lines, or galvanized piping in the home water system. High iron levels may result in the formation of brown stains in the vicinity of the faucet outlets of various fixtures in the home. With whirlpool bathtubs, the staining may be particularly pronounced because the aeration action can oxidize iron to a form that settles out on the inside of the tubs, especially noticeable with white tubs. If high iron in the water is present, you can also notice rust colored deposits inside your toilet tank or dishwasher. If this occurs, you need to contact the water supplier to determine the iron content and/or corrosion potential of the water and follow their suggestions for treatment. If your water supply is generated from a well you need to contact the water treatment company to test your water and suggest solutions if a problem is present.

Manganese - Manganese is found in many natural waters especially from wells. High manganese levels may result in the formation of small black particles that can stain laundry, especially noticeable with whites such as sheets or towels. With whirlpool bathtubs, the formation of small black particles may be particularly pronounced because the aeration action in the tub can oxidize manganese to an insoluble form that is especially noticeable with white tubs. If high manganese in the water is present, you may also notice black stains on white laundry. If this occurs, you need to contact the water supplier to determine the manganese content of the water and follow their suggestions for treatment. If your water supply is generated from a well, you need to contact a water treatment company to test your water and suggest solutions if a problem is present.

3. Treatment
If you have contacted your water supplier and followed their instructions and you are still having problems, you need to increase the frequency of cleaning with low-foaming detergent/bleach starting from monthly purging down to using it every other day as required to eliminate your particular problem. The use of certain bath oils, bubble bath soaps and bath additives may increase the level of accumulations of bath residue in the whirlpool system. More frequent cleaning may be necessary if these products are used in the whirlpool tub. If excess accumulations persist, you should discontinue the use of these products. If you have followed the monthly purging instructions and still have an excess accumulation of bath residue and desire an alternative cleaning mechanism, we recommend SUPER SYSTEMS CLEAN PLUS manufactured by Stearns Packaging Corporation to rectify this condition. This may be obtained by contacting Aquatic at (800) 945-2726. It is recommended that you follow the instructions provided by the manufacturer with the product. Repeated use may be necessary. SUPER SYSTEMS CLEAN PLUS does not replace the necessity to purge your whirlpool system at least once a month with a low foaming detergent and bleach.
## TROUBLESHOOTING GUIDE

**WARNING:** Always turn off power at the main electrical service panel when servicing your whirlpool.

<table>
<thead>
<tr>
<th>SYMPTOMS</th>
<th>POSSIBLE PROBLEMS</th>
<th>SUGGESTED SOLUTIONS</th>
</tr>
</thead>
</table>
| Pump does not start: | 1) GFCI or circuit breaker in OFF position.  
2) Fuses blown or thermal overload open.  
3) Locked motor shaft.  
4) Motor windings burned out.  
5) Defective starting switch inside single-phase motor.  
6) Disconnected or defective wiring.  
7) Low voltage. | 1) Reset GFCI.  
2) Contact your electrician.  
3) Contact Aquatic.  
4) Contact Aquatic.  
5) Contact Aquatic.  
6) Check and reconnect if needed.  
7) Contact your electrician. |
| Motor does not reach full speed: | 1) Low voltage.  
2) Motor windings connected for wrong voltage.  
3) Wiring too small.  
4) Suction or discharge line partly plugged.  
5) Impeller clogged. | 1) Contact your electrician.  
2) Contact Aquatic.  
3) Contact your electrician.  
4) Clean and unplug.  
5) Clean and unplug. |
| Pump runs, water not circulating: | 1) Leakage of air into suction system.  
2) Faulty suction line check valve.  
3) Suction screen may be clogged.  
4) Impeller may be clogged. | 1) Check suction screen for clogs.  
2) Contact Aquatic.  
3) Replace suction screen before operating. While motor is off, unscrew safety suction cover and remove any accumulated debris. If necessary, call a plumber to check the suction line. If problem persists, notify Warranty Services at (800) 945-2726 to arrange a repair service call.  
4) Contact Aquatic. |
| Noisy pump and motor: | 1) Worn motor bearings.  
2) Pumps touching a stationary object.  
3) Suction line partly plugged.  
4) Pump not supported properly. | 1) Contact Aquatic.  
2) Refer to installer/dealer.  
3) Clean and unplug.  
4) Contact Aquatic. |
| Leakage of water at shaft: | 1) Shaft seal requires replacement. | 1) Contact Aquatic. |
| Leaking unions: | 1) O-ring missing or damaged.  
2) Loose unions. | 1) Contact Aquatic.  
2) Tighten unions. |
| Vibration noise: | 1) Tub or tub plumbing is touching tile/wall.  
2) Pump is touching framing. | 1) Refer to installer/dealer.  
2) Refer to installer/dealer. |
| Whirlpool jets emit water outside of bathtub: | 1) Insufficient water in bathtub. | 1) Ensure water level is at least 3” above the highest whirlpool jet. |
| Water leakage: | 1) Call a plumber to determine and correct source of leak. If plumber determines that whirlpool system is at fault, notify Aquatic Technical Services at (800) 928-3707 to arrange a repair service call. | |
| Motor overheats (protector trips): | 1) Low voltage.  
2) Motor windings connected for wrong voltage.  
3) Wiring too small.  
4) Suction or discharge line partly plugged.  
5) Pump running at reduced speed.  
6) Impeller clogged.  
7) Pump located in a small space. | 1) Contact your electrician.  
2) Contact Aquatic.  
3) Contact your electrician.  
4) Clean and unplug.  
5) Reference “SYMPTOMS: Motor does not reach full speed.”  
6) Clean and unplug.  
7) Ensure pump has adequate ventilation and no objects are blocking air flow. |
| Pump does not shut off manually: | 1) Defective on/off button.  
2) Disconnected air hose. | 1) Shut off circuit breaker. Contact Aquatic.  
2) Shut off circuit breaker. Contact Aquatic. |
| Circuit breaker trips repeatedly: | 1) Defective breaker.  
2) Short circuit between bath and breaker box.  
3) Other items are connected to the same circuit. | 1) Contact electrician.  
2) Contact electrician.  
3) Contact electrician. |
